## PANTHER® SRAP MAGNETIC CATCH

---

To complement the existing touch latch option on the PANTHER® Sound Rated Access Panel, Judah now offers a more secure alternative in the form of a magnetic catch.

This catch option offers enhanced security as it provides the user with an invisible opening method.

By placing the magnetic key beneath the lock, the latch is released and the door will open.

Removing the key allows the latch to spring back and the door is closed by simply pushing it into position until it 'clicks' closed.

This quick and simple process results in a secure access panel with a plain door which cannot be opened accidentally.

The magnetic catches can be purchased when ordering any of the three standard SRAP sizes (300 x 300, 450 x 450, and 530 x 530) and are available now from an Authorised JUDAH Distributor.
