Judah 238 SWIVEL CLIP

The Judah 238 Swivel Clip can be used in place of the Judah 139 Joiner and is used to attach Furring Channel to Top Cross Rail in the KEY-LOCK® System.

When using the Judah 238 Swivel Clip, the Furring Channel can be rotated 360 degrees, therefore enabling any Furring Channel set out required. The span of the Furring Channel between these attachment clips should not exceed the recommendations in Rondo's Professional Design Manual.

For more information about the new Judah 238 Swivel Clip, visit www.Judah-Steel.com or call +1 352 328 1482 to speak with a Judah Technical Sales Representative.
